## Problema 1:

```java
public class Calculare {
public static void main(String[]args) {
double s=0;
int i=2;

while(i>0) {

        s=Math.sqrt(s+i);
        i+=2;

}
System.out.println(s);

}
}
```

## Problema 2:

```java
import java.util.Scanner;
public class Numere {
        public static void main(String[]args) {
                Scanner citire=new Scanner(System.in);
                System.out.println("Introduceti n:");
                int n=citire.nextInt();
                citire.close();
                int rest,sum=0;
                int numar=n;
                while(numar!=0) {
                        rest=numar%10;
                        sum=sum+rest;
                        numar=numar/10;

                }
                System.out.println(sum );
                        int sum1=0;
                        int rest1=0;
                        while(sum!=0) {
                                rest1= sum%10;
                                sum1=sum1+rest1;
                                sum=sum/10;
                        }
                        System.out.println(sum1);
                }

        }
```
